

Tree Recording Form

Project: Natural England - River Ise Tree Management Plan

TREE ref: R14

Date: 09.03.2015 **Surveyor:** JP/HP

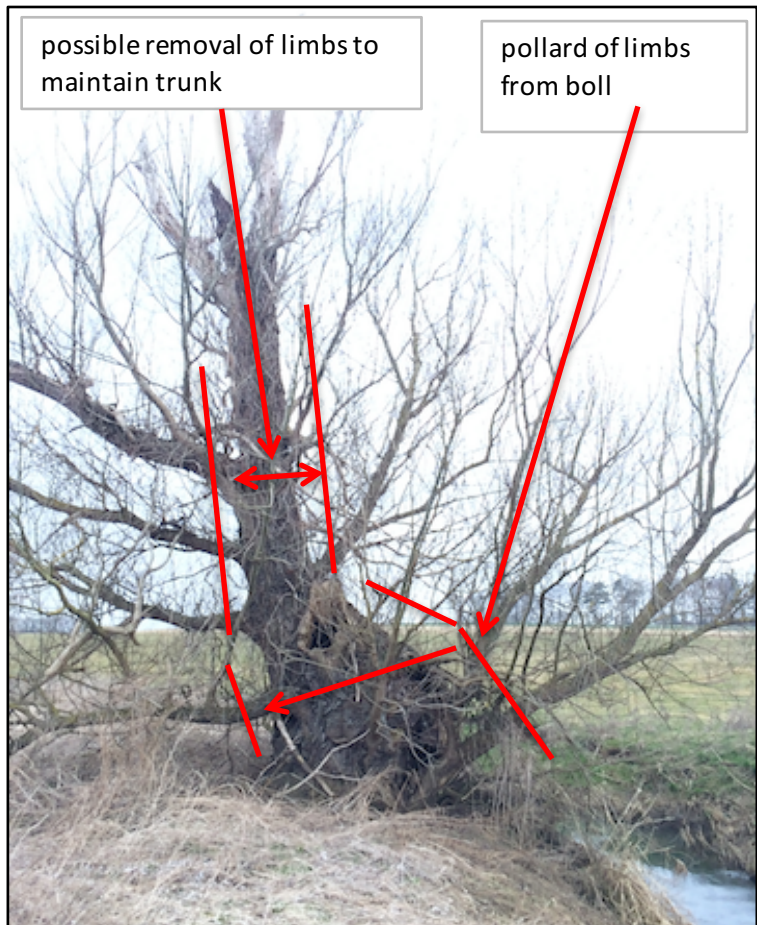

GPS: SP8648682963

Tree Data		Environmental Data	
Species	willow (<i>Salix</i> sp.)	Dist. from bank (m)	1.5
Age (yrs)	mature	Bank height (m)	2
Height (m)	15	Land use	arable
Girth (m)	7.3 (base)	Past mgt.	historical pollard

Present Condition	Suggested Management
-------------------	----------------------

Mature pollard (main boll - 1.2m high), showing some level of collapse. Good general growth, although had high level of deadwood.

Re-pollard limbs which have developed from main boll and may fall into the river. The limbs growing from main trunk may require management, if the tree becomes unstable in the medium term.

Protected Species Potential?	Management Priority
------------------------------	---------------------

High bat potential - otter spraints around base of tree, possible rest site.

Initial work 1-3yrs
